## Material Origin Declaration

Liberty Merchant Bar plc manufactures rolled steel merchant bar products. The raw material is purchased in the form of semi-finished steel billets from approved steel manufacturers, which are supplied with a certificate of chemical analysis according to the specification ordered.

LMB steel products are:

- Re-heated and rolled from con-cast billets manufactured via the Basic Oxygen converter steel (BOS) or Electric arc furnace (EAF) route only
- Rolled from killed steel
- Supplied in the 'as rolled' condition only

Typical content depends on the route and chemistry of the billet:

- BOS route typically contains between 10% - 25% scrap material
- EAF route contains nearly 100% scrap material

The inherent recyclability of steel means that it can typically be recycled c. 8-10 times throughout its lifetime.
